### Wellbeing Corner

#### What causes anxiety?

"Anxiety evolved to protect us. It's generated by our primal brain, which has the job of keeping us safe and out of danger. Our primal brain constantly scans for danger and as soon as it detects a threat, it floods us with adrenaline, creating physical symptoms such as dizziness, sweating, trembling, nausea and more. This causes the fight/flight/freeze response that people experience when suffering from acute anxiety.

"If we're in life-threatening danger we need these automatic reactions. Thankfully most of the time we don't need them, but they can easily kick in - causing anxiety, distress and negatively impacting our life."

It is very important that we have all correct and up to date contact details and information for parents/carers.

If you need to change any contact details or update your child's permissions, please contact the school office to make these changes.
